Additional Details

Both personally and professionally, I always want to know the overall picture, how something works, why, and how it can be improved. Working at a large logistics company in the Netherlands starting from the lowest position for me was not enough. With my constant proof that I can do more and I want to be something more, learning every single process in the work. In this way, the opportunity to build on it opened up to me, taking on various tasks: - monitoring the proper execution of the process entrusted to me; - Clear systematic warehouse errors such as incorrect customer/order information on the label or document set accompanying delivery. In conclusion, my experience in this company made me challenge myself every day, learning different things not only about the nature of work but also about working with complex RP programs.

Desired Salary: 2000 EUR

Desired job: Front-End Web Developer
